Objet : TR: EU ETS - reporting and verification

Dear Aircraft Operator,

The end of the Year arrives fast and we suggest to remember you the following necessary step to comply with the EU ETS Scheme.

For any guidance, you will find in attachment a file explaining the key information in BELGIUM- Wallonie in relation to EU ETS.

As from the first January 2014, you will be able to introduce your annual emission report through the IT System ETSWAP (<https://www.ets-awac.be>). If you have lost your login data, let us know by email.

As you probably know, the European Commission has proposed a modification to the Emission Trading Directive with regards to aviation. But, as it is not yet officially adopted by the Council and the Parliament, it is more secure to work «business as usual », taking then into account the full scope of the EU ETS.

If, in the meantime, the modification is officially adopted, it will be easier to recalculate how many allowances will have to be surrendered in the European Registry in accordance with a possible new scope.

Another important change that occurs is the obligation to choose a verifier accredited under the ISO norm 14065 and the European Accreditation and Verification Regulation (<http://eur-lex.europa.eu/LexUriServ/LexUriServ.do?uri=OJ:L:2012:181:0001:0029:EN:PDF>).

In the attached document, under « competent authorities », you will find an help to find such an accredited verifier.

Once your verifier is selected, he will have to ask us an access to our IT electronic reporting system. Indeed all the workflow related to the verification have to be done through this way.

The annual verified emission report must be finalized and submitted before the 13th of March 2014.

In case of any difficulty don't hesitate to contact us.

If we do not have the opportunity to read you by then, the Walloon Air and Climate Agency wishes You a nice Christmas and an happy New Year.

Best regards.

François VERPOORTEN,

Climate & Carbon Market Advisor
